(54) Title: A METHOD MANUFACTURING NANO-FIBERS WITH EXCELLENT FIBER FORMATION

(57) Abstract: The present invention relates to a method for producing nanofibers with an excellent fiber formation property, characterized in that: when nanofibers (3) having a thickness of a nano level are produced by electrostatically spinning a spinning liquid (1) of a polymer resin solution on a collector (8) through a nozzle (2) under a high voltage, a collector (8) with a heater is used as the collector. The present invention can greatly improve the fiber formation property of the nanofibers.
